

Status of The Claims

Claims 2-7 and 13 are pending in the application having canceled claim 1, amended claim 2, and added new claim 13.

Rejection Under 35 USC 112

1-5. Claims 8 and 11 have been rejected under 35 USC 112 as failing to comply with the enablement requirement. Claims 8-11 have been canceled herewith.

The activation means have been defined in original claim 8 but clearly on page 2 lines 1-4 Applicant states “The disclosure of U.S. Patents 5,305,244 and 5,844,824 are incorporated by reference in the present disclosure”. U.S. Patent 5,844,824 very specifically and in detail defines several activation means embodiments including “audio activation means, electroencephalography activation means and eye-tracking activation means”. Since the disclosure of U.S. 5,844,824 (commonly owned) clearly defines these activation means, it is respectfully submitted that the specification does enable one of reasonable skill in the art to make and or use the invention without undue experimentation.

Applicant is also submitting herewith a drawing from 5,844,824 showing a prior art system; (Figure 3).

6-18. Claims 1-12 were rejected under 35 USC 102(b) as being anticipated by Bunte et al 5,873,070. Claims 8-12 have been cancelled and new independent claim 1 clearly defines around Bunte et al. Bunte et al does not disclose a second display used to supplement data from data of a primary display Neither does Bunte et al show a second display to augment data displayed on the primary display. Bunte et al is concerned with information that “has been decoded”; see column 5 lines

11-14. This is completely different from the present invention. Also, Bunte et al is specific to "data collected via a data collection terminal may be communicated to said host via at least one of said user position and next task location device"; claim 1. This is not anticipatory of at least one primary display and at least one supplemental display which augments and supplements data on said primary display which is different from one display to the other. The data on each of Bunte's units is the same not different data as in the present invention. To supplement or (supplemental display) means "an addition to something" – The New American Webster Dictionary, Library of Congress Catalog Card No. 55-10446.

19. The prior art made of record adds little to Bunte et al, therefore a detailed discussion on it is not warranted.

Applicant respectfully requests reconsideration and allowance of the present claims

1-7.

Respectfully submitted,

JAMES J. RALABATE
